RESEARCH ARTICLES

Arrigo, K. R.
Impact of ozone depletion on phytoplankton growth in the Southern Ocean: large-scale spatial and temporal variability 1–12

Fernández, E., Balch, W. M., Marañón, E., Holligan, P. M.
High rates of lipid biosynthesis in cultured, mesocosm and coastal populations of the coccolithophore *Emiliania huxleyi* 13–22

Vetter, Y.-A., Deming, J. W.
Extracellular enzyme activity in the Arctic Northeast Water polynya 23–34

Wilcox, R. M., Fuhrman, J. A.
Bacterial viruses in coastal seawater: lytic rather than lysogenic production 35–45

Purcell, J. E., Nemazie, D. A., Dorsey, S. E., Houde, E. D., Gamble, J. C.
Predation mortality of bay anchovy *Anchoa mitchilli* eggs and larvae due to scyphomedusae and ctenophores in Chesapeake Bay 47–58

Juanes, F., Conover, D. O.
Piscivory and prey size selection in young-of-the-year bluefish: predator preference or size-dependent capture success? 59–69

Kennedy, A. D.
Predation within meiofaunal communities: description and results of a rapid-freezing method of investigation 71–79

Butler, M., Dam, H. G.
Production rates and characteristics of fecal pellets of the copepod *Acartia tonsa* under simulated phytoplankton bloom conditions: implications for vertical fluxes 81–91

Charmantier, G., Charmantier-Daures, M.
Ontogeny of osmoregulation and salinity tolerance in the isopod crustacean *Sphaeroma serratum* 93–102

Gerdol, V., Hughes, R. G.
Feeding behaviour and diet of *Corophium volutator* in an estuary in southeastern England 103–108

Gerdol, V., Hughes, R. G.
Effect of *Corophium volutator* on the abundance of benthic diatoms, bacteria and sediment stability in two estuaries in southeastern England 109–115

Bock, M. J., Miller, D. C.
Seston variability and daily growth in *Mercenaria mercenaria* on an intertidal sandflat 117–127

Nakaoka, M.
Size-dependent reproductive traits of *Yoldia notabilis* (Bivalvia: Protobranchia) 129–137

Raya, C. P., Fernández-Núñez, M., Balguerías, E., Hernández-González, C. L.
Progress towards ageing cuttlefish *Sepia hierredda* from the northwestern African coast using statoliths 139–147

Sewell, M. A.
Birth, recruitment and juvenile growth in the intraovarian brooding sea cucumber *Leptosynapta clarki* 149–156

Nandakumar, K., Tanaka, M.
Effects of neighboring organisms on the growth of three intertidal encrusting cheilostome bryozoans 157–163

Tumbiolo, M. L., Downing, J. A.
An empirical model for the prediction of secondary production in marine benthic invertebrate populations 165–174

Berges, J. A., Montagnes, D. J. S., Hurd, C. L. Harrison, P. J.
Fitting ecological and physiological data to rectangular hyperbolae: a comparison of methods using Monte Carlo simulations 175–183

Zimmerman, R. C., Cabello-Pasini, A., Alberte, R. S.
Modeling daily production of aquatic macrophytes from irradiance measurements: a comparative analysis 185–196

NOTES

Ho, C., Marra, J.
Early-spring export of phytoplankton production in the northeast Atlantic Ocean 197–202

Jeong, H. J.
Predation by the heterotrophic dinoflagellate *Protoperidinium* cf. *divergens* on copepod eggs and early naupliar stages 203–208

Volume 114 · Number 3 · 1994

In Memoriam Dr Orest A. Scarlato 209

RESEARCH ARTICLES

Macpherson, E.
Substrate utilisation in a Mediterranean littoral fish community 211–218

Šolić, M., Krstulović, N.
Role of predation in controlling bacterial and heterotrophic nanoflagellate standing stocks in the coastal Adriatic Sea: seasonal patterns 219–235

Karner, M., Ferrier-Pagès, C., Rassoulzadegan, F.
Phagotrophic nanoflagellates contribute to occurrence of α-glucosidase and aminopeptidase in marine environments 237–244

Johnsen, G., Nelson, N. B., Jovine, R. V. M., Prézelin, B. B.
Chromoprotein- and pigment-dependent modeling of spectral light absorption in two dinoflagellates, *Prorocentrum minimum* and *Heterocapsa pygmaea* 245–258

Goes, J. I., Handa, N., Taguchi, S., Hama, T.
Effect of UV-B radiation on the fatty acid composition of the marine phytoplankter *Tetraselmis* sp.: relationship to cellular pigments 259–274

Zimmerman, A. R., Benner, R.
Denitrification, nutrient regeneration and carbon mineralization in sediments of Galveston Bay, Texas, USA 275–288

Howes, B. L., Goehringer, D. D.
Porewater drainage and dissolved organic carbon and nutrient losses through the intertidal creekbanks of a New England salt marsh 289–301

Van Heukelem, L., Lewitus, A. J., Kana, T. M., Craft, N. E.
Improved separations of phytoplankton pigments using temperature-controlled high performance liquid chromatography 303–313

MARINE ECOLOGY PROGRESS SERIES

HISTORY: Marine Ecology Progress Series (MEPS) was established in response to requests from numerous marine ecologists from all over the world. When founded, MEPS was based on 'Marine Ecology' – the first comprehensive, integrated treatise on life in oceans and coastal waters – conceived, organized and edited by Professor Otto Kinne, and published by John Wiley & Sons.

AIM: MEPS serves as a world-wide forum for all aspects of marine ecology, fundamental and applied. The journal covers: microbiology, botany, zoology, ecosystem research, biological oceanography, ecological aspects of fisheries and aquaculture, pollution, environmental protection, conservation, resource management.
Ecological research has become of paramount importance for man's future. The information presented here should, therefore, encourage critical application of ecological knowledge for the benefit of mankind and, in fact, of life on earth. Marine Ecology Progress Series has received recognition as the leader in its field. The journal strives for

- complete coverage of the field of marine ecology
- the highest possible quality of scientific contributions
- quick publication
- a high technical standard of presentation.

SCOPE: MEPS is international and interdisciplinary. It presents rigorously refereed and carefully selected research articles, reviews and notes, as well as comments, concerned with:

Environmental Factors: Tolerances and responses of marine organisms (microorganisms, autotrophic plants, and animals) to variations in abiotic and biotic components of their environment; radioecology.

Physiological Mechanisms: Synthesis and transversion of organic material (mechanisms of auto- and heterotrophy); thermo-, ion-, osmo- and volume-regulation; stress resistance; non-genetic and genetic adaptation; population genetics; orientation in space and time; migrations; behavior; molecular basis of ecological processes.

Cultivation: Maintenance and rearing of, as well as experimentation with, marine organisms under environmental and nutritional conditions which are, to a considerable degree, controlled; analysis of the physiological and ecological potential of individuals, populations and species; determination of nutritional requirements; ecological aspects of aquaculture; water-quality management; culture technology.

Dynamics: Production, transformation, and decomposition of organic matter; flow patterns of energy and matter as these pass through organisms, populations and ecosystems; biodiversity; variability of ecosystem components; trophic interrelations; population dynamics; plankton ecology; benthos ecology; estuarine and coastal ecology; wadden-sea ecology; coral reef ecology; deep-sea ecology; open-ocean ecology; polar ecology; theoretical ecology; ecological methodology; ecological modelling and computer simulation.

Ocean Management: Human-caused impacts: their role as modifiers and deformers of living systems, their biological consequences and their management and control; inventory of living resources in coastal areas, estuaries and open oceans; ecological aspects of fisheries; pollution of marine areas and organisms; protection of life in the seas; management of populations, species and ecosystems; management of coastal zones and sea areas; biotechnology.

Scientific publications appearing in this journal have been rigorously refereed, carefully quality-improved, and professionally selected by our editorial staff. These publications, and all parts thereof, are protected by copyright. This covers the exclusive rights of the publisher to *reproduce* (by any means, including photographic or electronic), to *distribute* (including via photocopies, reprints, or electronic means), and to *store* on microfilm, in electronic data bases, on video disks, etc., this material. The acceptance regulations of a manuscript for publication automatically include the consent of the author(s) to transfer the copyright to the publisher. Permission for exceptions to these rules must be obtained in writing from the publisher at the time of manuscript submission.
In the USA, photocopies may be made for personal or in-house use beyond the limitations stipulated under Section 107 or 108 of U.S. Copyright Law, provided a fee (US $3.00 per article) is paid to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA.

Publisher, editors and authors do not accept legal responsibility for errors, omissions or claims, nor do they provide any warranty, express or implied, with respect to information published in MEPS.
